Contents

Preface iv

1 Divisibility Theory in the Integers 1
- 1.1 The Division Algorithm . . . 1
- 1.2 The Greatest Common Divisor . . . 1
- 1.3 The Euclidean Algorithm . . . 1
- 1.4 The Diophantine Equation $ax+by=c$ . . . 1

2 Primes and Their Distribution 2
- 2.1 The Fundamental Theorem of Arithmetic . . . 2
- 2.2 The Sieve of Eratosthenes . . . 2
- 2.3 The Goldbach Conjecture . . . 2

3 The Theory of Congruences 3
- 3.1 Basic Properties of Congruence . . . 3
- 3.2 Binary and Decimal Representations of Integers . . . 3
- 3.3 Linear Congruences and the Chinese Remainder Theorem . . . 3

4 Fermat's Theorem 4
- 4.1 Fermat's Little Theorem and Pseudoprimes . . . 4
- 4.2 Wilson's theorem . . . 4

5 Number-Theoretic Functions 5
- 5.1 The Sum and Number of Divisors . . . 5
- 5.2 The Möbius Inversion Formula . . . 5
- 5.3 The Greatest Integer Function . . . 5

6 Euler's Generalization of Fermat's Theorem 6
- 6.1 Euler's Phi-Function . . . 6
- 6.2 Euler's Theorem . . . 6
- 6.3 Some Properties of the Phi-Function . . . 6

7 Primitive Roots and Indices **7**
7.1 The Order of an Integer Modulo n . . . 7
7.2 Primitive Roots for Primes . . . 7
7.3 Composite Numbers Having Primitive Roots . . . 7
7.4 The Theory of Indices . . . 7

8 The Quadratic Reciprocity Law **8**
8.1 Euler's Criterion . . . 8
8.2 The Legendre Symbol and Its Properties . . . 8
8.3 Quadratic Reciprocity . . . 8
8.4 Quadratic Congruences with Composite Moduli . . . 8

9 Introduction to Cryptography **9**
9.1 From Caesar Cipher to Public Key Cryptography . . . 9
9.2 The Knapsack Cryptosystem . . . 9
9.3 An Application of Primitive Roots to Cryptography . . . 9

10 Numbers of Special Form **10**
10.1 Perfect Numbers . . . 10
10.2 Mersenne Primes and Amicable Numbers . . . 10
10.3 Fermat Numbers . . . 10

11 Certain Nonlinear Diophantine Equations **11**
11.1 The Equation $x^2+y^2=z^2$ . . . 11
11.2 Fermat's Last Theorem . . . 11

12 Representation of Integers as Sums of Squares **12**
12.1 Sums of Two Squares . . . 12
12.2 Sums of More Than Two Squares . . . 12

13 Fibonacci Numbers **13**
13.1 The Fibonacci Sequence . . . 13
13.2 Certain Identities Involving Fibonacci Numbers . . . 13

14 Continued Fractions **14**
14.1 Finite Continued Fractions . . . 14
14.2 Infinite Continued Fractions . . . 14
14.3 Farey Fractions . . . 14
14.4 Pell's Equation . . . 14

15 Some Modern Developments **15**
15.1 Primality Testing and Factorization . . . 15
15.2 An Application to Factoring: Remote Coin Flipping . . . 15
15.3 The Prime Number Theorem and Zeta Function . . . 15

Preface

This textbook uses Lean 4 to formalize selected mathematical statements and proofs.

- **Tools.** Lean is an interactive theorem prover; Mathlib is a library of formalized mathematics. This edition uses Lean 4.34.0 and Mathlib v4.34.0 (revision `5ed296525643`).
- **Reading the proofs.** Each paired statement or proof step gives a mathematical explanation followed by its Lean code. The explanations can be read independently; code fragments are read in order within the complete declaration.
- **Verification.** Lean checks formal proofs under their stated assumptions. Verification covers only statements linked to checked declarations. Agreement between the explanations, displayed code, and checked proofs is reviewed separately.

Chapter 1

Divisibility Theory in the Integers

1.1 The Division Algorithm

1.2 The Greatest Common Divisor

1.3 The Euclidean Algorithm

1.4 The Diophantine Equation $ax+by=c$

Chapter 2

Primes and Their Distribution

2.1 The Fundamental Theorem of Arithmetic

2.2 The Sieve of Eratosthenes

2.3 The Goldbach Conjecture

Chapter 3

The Theory of Congruences

3.1 Basic Properties of Congruence

3.2 Binary and Decimal Representations of Integers

3.3 Linear Congruences and the Chinese Remainder Theorem

Chapter 4

Fermat's Theorem

4.1 Fermat's Little Theorem and Pseudoprimes

4.2 Wilson's theorem

Chapter 5

Number-Theoretic Functions

5.1 The Sum and Number of Divisors

5.2 The Möbius Inversion Formula

5.3 The Greatest Integer Function

Chapter 6

Euler's Generalization of Fermat's Theorem

6.1 Euler's Phi-Function

6.2 Euler's Theorem

6.3 Some Properties of the Phi-Function

Chapter 7

Primitive Roots and Indices

7.1 The Order of an Integer Modulo n

7.2 Primitive Roots for Primes

7.3 Composite Numbers Having Primitive Roots

7.4 The Theory of Indices

Chapter 8

The Quadratic Reciprocity Law

8.1 Euler's Criterion

8.2 The Legendre Symbol and Its Properties

8.3 Quadratic Reciprocity

8.4 Quadratic Congruences with Composite Moduli

Chapter 9

Introduction to Cryptography

9.1 From Caesar Cipher to Public Key Cryptography

9.2 The Knapsack Cryptosystem

9.3 An Application of Primitive Roots to Cryptography

Chapter 10

Numbers of Special Form

10.1 Perfect Numbers

10.2 Mersenne Primes and Amicable Numbers

10.3 Fermat Numbers

Chapter 11

Certain Nonlinear Diophantine Equations

11.1 The Equation $x^2+y^2=z^2$

11.2 Fermat's Last Theorem

Chapter 12

Representation of Integers as Sums of Squares

12.1 Sums of Two Squares

12.2 Sums of More Than Two Squares

Chapter 13

Fibonacci Numbers

13.1 The Fibonacci Sequence

13.2 Certain Identities Involving Fibonacci Numbers

Chapter 14

Continued Fractions

14.1 Finite Continued Fractions

14.2 Infinite Continued Fractions

14.3 Farey Fractions

14.4 Pell's Equation

Chapter 15

Some Modern Developments

15.1 Primality Testing and Factorization

15.2 An Application to Factoring: Remote Coin Flipping

15.3 The Prime Number Theorem and Zeta Function
